

Computer networking

Computer Networking: - A computer network is an interconnection of a group of computers. Networks may be classified by what is called the network layer at which they operate according to basic reference models considered as standards in the industry such as the four-layer [Internet Protocol Suite](#) model. While the seven-layer [Open Systems Interconnection \(OSI\)](#) reference model is better known in academia, the majority of networks use the Internet Protocol Suite (IP) as their network model.
